

Racket Math Libraries

Version 5.3.0.6

Jens Axel Søgaard

May 24, 2012

These libraries is intended to become the backend for a CAS written in Racket. A CAS requires libraries for a wide range of mathematical concepts and algorithms.

The matrix library implements matrices over Racket numbers. The implementation is written in Racket, that is there are no external dependencies.

The development version of this library is available at Github: <https://github.com/soegaard>
